## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's Amendment filed on 2/20/2008 has been entered with amended claims 41-43, 46-48, 50-52, 63-64, 69-70. In this Office Action, claims 41-52, 63-64, 69-70 are pending. Applicant also filed on 2/20/2008 a Petition to revive the Application delay in response to Non-final office action mailed 11/9/2007.
2. Applicant's amendment overcomes the claims objection under minor informalities.
3. Applicant's amendment overcomes the rejection of claims under 35 U.S.C. 101.

### ***Reasons for allowance***

4. The following is an examiner's statement of reasons for allowance:
  - Prior art of record does not appear to teach or suggest or render obvious the claimed limitations in combination with the specific added limitations as recited in independent claims 41, 46, 50, 64 and 69-70. The prior art of record fails to teach or suggest in combination of claimed elements including "constructing a trainable semantic vector for each sample dataset relative to the predetermined categories in a multi-dimensional

semantic space”, “constructing a trainable semantic vector for each category based on the trainable semantic vectors for the sample datasets” and “determining a distance between the trainable semantic vector for the new dataset and the trainable semantic vector of each category” as recited in independent claims 41, 46, 50, 64 and 69-7.

- Foltz et al. (US Patent 6,356,864), Bellegarda et al. (US Patent 6,208,971) and Landauer et al. (US Patent 5,301,109) teach latent semantic indexing and uses singular value decomposition to transform a document from a set of words to a set of semantic dimensions, whereas the current invention deals with a trainable semantic vector and it is designed to support predetermined dimensions. Foltz teaches a methodology for analyzing and evaluating a sample text, such as essays or documents. This methodology presumes there is an underlying, latent semantic structure in the usage of words, whereas Bellegarda teaches a method for command recognition using data-driven semantic inference includes recognizing a sequence of words received as the voice command, and Landauer teaches a methodology for retrieving textual data objects in a multiplicity of languages. The assumption in this reference is the same as Foltz reference.
- These claims were allowed in earlier Office action mailed on 11/9/2007 with a condition to overcome rejection of claims under 35 U.S.C. 101 and

objected claims 42-43, 46-48, 51-52 were objected to because of the following informalities.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
